WELCOME

I had a lot to do the last weeks but after 14 weeks here it is - Nr.: 3. Sorry for the delay.

A lot is happening in between, Musk want to buy Twitter, a lot of new Groupbuys and IC's and so on but one thing did not change - the Damn Fine keyboards full of nice community pictures.

You notice that it's summer when less keyboard stuff is flushed into the world but of course it's nice when you don't spend your time in front of the computer but in the fresh air. So the third edition took a while until i got some boards together but it worked and you can browse here again. If it's not fast enough for you until the new episode, join in, take part or send your boardpictures.

How it works you can find on the website.

I change the infobox a little bit. If it is possible you will now find the used Deskmatic in the infobox (just for you Kristina ;)).

The last cover-keyboard: IBM Model M

So keep sending your keyboard pictures and other stuff.

Last but not least thank you for reading the DAMN FINE KEYBOARDS.

www.damnfinekeyboards.com

Have fun!

Philipp

MODS: lubing

The image shows two custom keyboards with translucent blue keycaps that are illuminated from within, casting a soft blue glow. The keyboards are positioned on a dark, textured surface. A central watermark, the website address 'www.damnfinekeyboards.com', is overlaid in white text across the middle of the image. The keyboard on the right has the 'corne' logo visible on its top plate. The overall lighting is dim, emphasizing the light from the keycaps.
